

Ergonomic Vacuum Tube Lifters

Vacuum Pad Attachments

Quick Release Extensions

ANVER Quick Release extensions are useful for applications where the load must be picked up from a location where it is difficult to maneuver the lift tube. By creating a longer distance from the Lift Head to the Pad Attachment, these extensions make sure that the tube lifter is comfortable and easy to operate. With an ANVER quick release system, the extensions can be attached or removed in seconds, making it easy to adapt to differing load sizes and shapes.

Features:

- Heavy Duty Welded Steel Construction
- A Variety of Sizes Available to fit Any Application
- Attaches quickly and easily to ANVER quick release adapters
- Nickel Plating Also Available - Please Consult Factory
