

Vacuum Cups & Suction Cups

Bellows 1.5 Cup with Built-In Mounting Plate

Built-in Aluminum Backing Plate allows you to screw right into the cup without a secondary fitting.

This 1.5 Bellows Vacuum Suction Cup attaches gently and easily with minimum pressure. Excellent for most concave and convex shapes, bellows suction cups attachment to curvatures such as containers, cylinders, etc., and can be used in any orientation. The spring action compensates for height variances in the load or machine inaccuracies. The bellows suction cup design duplicates the function of mechanical spring and ball-joint connectors in a much smaller and more economical package.

This cup has an internal aluminum mounting plate and a single G 1/4" Thread. (This is basically a straight 1/4" pipe thread.) We also offer these with a 1/4" NPT thread for a nominal charge.

Dimensions are similar to a number of other cups in this size range. This cup is worth consideration.

ANVER Item Number	Description
B1.5-76-NBR-14G	Bellows Cup, 76 mm with G 1/4" Port Mounting Nitrile
B1.5-76-SIT-14G	Bellows Cup, 76 mm with G 1/4" Port Mounting Silicone
